

Operational accountability for delivery work

A lightweight workflow and ticket board for SOWs, delivery reviews, customer actions, blockers, and ownership.

Built to replace scattered Excel tracking with fast execution visibility across delivery, sales, governance, and customer coordination.

Fast adoption

Clear ownership

Blocked work visible

AI-assisted clarity

The screenshot displays the TRNAWL Dashboard interface. On the left is a sidebar with the TRNAWL logo and a list of navigation items: Dashboard (highlighted), Tickets, Workflows, Customers, Customer Actions, Calendar, Reports, Project Plan, Dev Log, and Admin. The main content area is titled 'Dashboard' with the subtitle 'Operational health, blockers, and work needing attention.' In the top right corner of the main area are buttons for '+ Ticket' and 'Sign out'. Below the title is a row of four summary cards: '14 Open tickets', '0 Overdue', '9 Blocked', and '0 Customer actions'. The 'Priority Work' section on the left lists three items: 'mail terst' (Due in 2d, Task, No customer, Owner: Thomas, due May 25), 'Test' (Due in 2d, Task, No customer, Owner: Thomas, due May 25), and 'ToonTown Telecom: Create SOW Intake Ticket' (Due in 5d, SOW, ToonTown Telecom, Owner: Porky Pig, due May 28). The 'Active Blockers' section on the right lists three blockers: 'ToonTown Telecom: Delivery Review' (Waiting for Delivery, Blocked 1d - Porky Pig, due May 30), 'ToonTown Telecom: Scope Boundary Review' (Scope Unclear, Blocked 1d - Thomas, due May 31), and 'ToonTown Telecom: Commercial Input Check' (Dependency Unresolved, Blocked 1d - Porky Pig, due May 31).

Simple tickets without Jira-level friction

Tickets keep the working surface small: title, owner, customer when relevant, due date, status, blocker, updates, and history.

The board defaults to the current user while still allowing owner, type, and status filtering.

Owner first

Fast status changes

Notes and history

Turn tribal knowledge into reusable delivery paths

Workflow templates generate the minimum operational review work for SOWs, delivery feasibility, legal input, scope boundaries, and final review. Calendar capacity planning shows who is booked, for which task or customer, and when work is due.

Customer Action Follow-Up

Tracks customer-owned actions with internal accountability.

Generate Workflow

Delivery Review Workflow

Coordinates delivery feasibility, assumptions, scope, and handoff review.

Generate Workflow

New SOW Workflow

Creates the minimum operational review path for a new SOW.

Generate Workflow

Customer Action Follow-Up Tasks

1. Define customer action

Clarify the customer-owned action, expected output, internal owner, and due date.

Starts immediately

2. Internal follow-up owner check

Confirm who follows up, what message is needed, and what happens if the action is late.

Depends on: 1. Define customer action

3. Customer reminder

Send or prepare the customer follow-up and record the response status.

Depends on: 1. Define customer action
